

Executive Summary: Passenger Satisfaction Analysis

Objective: To identify the key factors influencing passenger satisfaction in order to guide strategic and targeted service improvements.

This analysis is based on three core insights derived from the interactive Tableau Dashboard: Customer Segmentation, Class Performance, and Delay Impact.

Analytical Focus	Key Finding	Strategic Recommendation
Customer Segmentation	Business Travel is the primary driver of satisfaction, especially among Loyal Customers . Conversely, Personal Travel consistently registers a significantly lower satisfaction rate across all segments.	Launch dedicated initiatives to enhance the Personal Travel experience . Focus on providing high-value packages, such as improved in-flight entertainment or faster check-in options, to address the low satisfaction baseline in this segment.
Class Performance	While Business Class achieves the highest satisfaction, the Eco Plus class is performing poorly, recording a satisfaction rate below that of the standard Eco class.	Immediately re-evaluate the benefits and service delivery of the Eco Plus class. Investigate the root cause of this underperformance, which may be related to unmet customer expectations or insufficient service differentiation.
Delay Impact (Scatter Plot)	There is a strong, direct correlation between delays and dissatisfaction. Any delay exceeding 30-45 minutes results in a notable increase in the proportion of 'neutral or dissatisfied' passengers.	Implement a strategic goal to minimize average departure and arrival delays. When delays are unavoidable, focus on proactive communication and transparent updates, particularly when delays cross the 45-minute threshold, to manage passenger expectations effectively.

Conclusion: To achieve maximum satisfaction, the organization must continue to excel in serving its loyal Business Travelers while urgently deploying targeted improvements to boost satisfaction within the **Personal Travel** segment and address the fundamental performance issues observed in the **Eco Plus** class.
